

## Donald D. Clayton: Single-Author Journal Publications

---

Donald Clayton has published a very large number of single-author papers. These are the most creative research publications because the author must conceive the physical idea, develop the mathematics, and write the text of any paper of which he is sole author. Then it must be approved by scientific referees from the same field of research. In the following publication list, these sole-author papers judged by scientific referees are highlighted by the **E** symbol, which is further subdivided into Clayton's research specialties: astrophysics and planetary physics. In addition, Clayton's non refereed (invited) publications are designated by **Inv**.

**E** = single-author papers in refereed journals: by area.

**E<sub>Ap</sub>**=astrophysics (46 papers), **E<sub>Pi</sub>**=planetary physics (27 papers)

**Inv** =single-author invited papers (43 unrefereed papers)

**Violet titles**= single-author and multiple-author papers presenting original, seminal ideas.
